PAPER CALIBRATION

1 Make sure Ozobot is powered off, then place it in a black circle slightly bigger than Ozobot. If you are using markers, create this circle using a black marker.

2 Press & hold Ozobot's Power Button for 2-4 sec. until top light blinks white. Then, release Power Button.

3

Ozobot blinks green when calibrated. If Ozobot blinks red, start over from step 1. Evo also spins during calibration.

4

Press the Power Button to turn Bit back on. Evo powers on automatically after calibrating.

Calibrazione su schermo

DIGITAL CALIBRATION

Set your screen brightness to 100% and make sure the auto-brightness feature is turned off on your tablet or computer screens.

Place Ozobot against a white section of the screen (i.e. the calibration circle in OzoBlockly)

Press & hold Ozobot's Power Button for 2-4 sec. until top light blinks white. Then, release Power Button.

When Ozobot blinks green, it means that it has successfully calibrated. Start over if Ozobot blinks red.

Evo by Ozobot

Edu Utility
Updater

Single Click	Double Click	Press and Hold
Power On/Off	Run programs	Calibrate
